

**ICANN|74
THE HAGUE**

Welcome to **ICANN75**

Greetings from the BC Chair and **Welcome to ICANN75!!**

It's a pleasure to join you at ICANN's second hybrid meeting of 2022. Just as was the case at ICANN74 in The Hague, our meeting here in Kuala Lumpur offers BC members – those participating in person and remotely – the opportunity to connect with industry colleagues and our many friends, and to contribute to the ICANN community's deliberations and discussions.

As always is the case, the issues before the BC are many and varied, and our

constituency will have the opportunity to weigh in on governance matters of the day. Whether you're new to the BC or are a veteran of our work, your knowledge and opinions are important, and you are very much encouraged to join the discussions, ask questions, and make your input known.

ICANN75 represents ICANN's Annual General Meeting, a six-day affair that will include constituency meetings, plenary sessions, interactions between stakeholders and ICANN leadership, a public forum, and other engaging

sessions. The BC will meet as a constituency on Sunday, September 18, and I certainly hope you'll be there to add your voice to our gathering.

The BC, as usual, has been busy working toward outcomes in the interests of its global membership. Our work of late has been focused on contributing to mitigation of domain name system (DNS) abuse, WHOIS accuracy scoping, onboarding changes to international DNS regulation, and partnering with the community on prioritizing ICANN's significant menu

>> continued from front page

of ongoing work. As always is the case, areas for contribution and advocacy are many.

ICANN Org has done its usual superb job of preparing a meeting schedule and venue that is sure to be as welcoming as possible, and the BC will seize upon the opportunity to collaborate with our community colleagues toward ICANN's mission of providing a stable, secure and resilient DNS. When you get a moment, take the opportunity to say thanks to ICANN staff for the significant effort that goes into planning an inclusive set of proceedings.

There is no shortage of challenges before ICANN, and this meeting will be dense with discussions and deliberations. Further, on behalf of the BC, I hope you'll raise your perspectives and thoughts as we debate the important issues of the day.

The BC very much needs your support and input. Our group represents the interests of business users of the internet, ranging from the small to multinational, and our responsibilities to our constituency have only grown over time. As challenges arise in ICANN policy work, we rely on the input of our membership in order to be most impactful.

As we embark on our work, don't hesitate to join and contribute. You'll find that your BC colleagues are open and welcoming to your input, and will help you advance your interests within the ICANN sphere.

Again, on behalf of your colleagues in the BC, welcome to ICANN75. All best for a productive time in Kuala Lumpur.

Sincerely,

Mason Cole, BC Chair

The Business Constituency A Member's Perspective

As a Canadian association of online pharmacy businesses, members of the Canadian International Pharmacy Association (CIPA) rely on the internet, the policies that shape it and technical stability it provides, to ensure safe and secure operations that serve our customers worldwide.

CIPA attended its first ICANN meeting in 2010 and joined the Business Constituency (BC) in 2012 to align with the constituency that promotes end-user confidence of the internet and works to ensure it is a safe place to conduct business. These are highly valued attributes for businesses and customers alike.

This year, CIPA celebrates two decades of continual presence by our association members, using the internet as our base of patient outreach. Our 20 years includes a perfect safety record that CIPA members have earned by following fundamentals guided by over 70 Standards of Practice and policies that each member must comply with to maintain authorized use of the

This year, CIPA celebrates two decades of continual presence by our association members, using the internet as our base of patient outreach.

Certification Mark (CIPA Seal). Here are a few foundational examples of what CIPA mandates from its members:

- Requiring a valid prescription from a physician who has examined the patient and is licensed to provide diagnosis

Continued: The Business Constituency - A Member's Perspective

Over our 20 years history, CIPA has seen the immense good of the internet – but we've also witnessed and been affected by the bad.

- Dispensing medication approved by the health authority in the jurisdiction in which the licensed pharmacy operates
- Having a licensed pharmacist on staff to supervise dispensing of medications and to be available for consultation upon patient request
- Obtaining demographic and medical information from the patient and maintaining a health profile with medication history to avoid adverse drug interactions
- Prohibiting dispensing of controlled substances, narcotics, products containing pseudoephedrine or highly temperature sensitive products.

As a BC member, we have shared within our constituency CIPA's commitment to safety and to serving people who can't afford, access, or trust medication where they live. We also meet and collaborate with registrars and registries within ICANN; and other internet infrastructure businesses we've met through ICANN including the Internet Infrastructure

Coalition (i2C), the DNA.org, and the Internet and Jurisdiction Policy Network (I&JPN), all of which seek to build a more trusted and trustworthy internet.

Over our 20 years history, CIPA has seen the immense good of the internet – but we've also witnessed and been affected by the bad. Our members have been directly impacted by the presence of bad actors that exist in the fake pharmacy space.

Additionally, the CIPA Seal has become so recognizable and respected that rogue pharmacy operators abuse it to trick people into believing they've found a legitimate website. This is an abuse of our registered trademark and causes reputational damage to our brand.

As a result, CIPA has strong concerns about DNS abuse, because bad actors erode the confidence customers have in safe online pharmacy shopping. We believe that appropriate access to Whois can mitigate those that prey upon the public; and CIPA believes in 'One World – One Internet', because

by pursuing harmful activities together, we can collectively maximize the good of a global, interoperable internet we all wish to see.

These are relevant issues to the Business Constituency, and to all of those who have built their businesses on the internet. Users rely on trust and good reputation to confidently conduct business online. Fraudulent use of identity, misinformation, harmful messaging and false claims are issues that damage the value of the internet.

The ICANN multistakeholder community provides the forum to have dialogue on all of the issues that shape the internet. For our part, CIPA is committed to continue this dialogue – and we look forward to another 20 years of safe dispensing for all who need us.

The Benefits of BC Membership

The Business Constituency (BC) is the voice of commercial Internet users within ICANN – the Internet Corporation for Assigned Names and Numbers.

Business users rely on a stable and secure Internet and e-commerce experience, one that serves their users and customers on a global basis. Through your participation in ICANN, and in the Business Constituency, your company will make a difference on behalf of business.

BC members contribute as:

- participants on the BC e-mail list to learn about and debate issues
- participants on telephone conferences to reach consensus on key issues
- participants at physical meetings coincident with ICANN global meetings
- issue managers on specific topics
- bridges for information flow between other GNSO constituencies

The mission of the BC

The Constituency fully represents the views of the Internet business user community.

ICANN policy positions are consistent with the development of business via an Internet that is stable, secure and reliable while promoting consumer confidence.

ICANN policy positions derive from broad stakeholder participation in a common forum for suppliers and users.
