- Requesting confidentiality (optional):** Checking this box will notify the Registrar of your request for confidentiality. Note that this is a voluntary system, and the participating registrars have agreed to use their best efforts to honor your request. This may include the registrar taking certain steps to follow up on your request, providing you with information on the steps that can be taken, or rejecting your request without notifying the registered name holder.

Identify your request priority level.

Priority Setting Disclaimer: Please note that the registrar has the ability to change the priority level if they determine your request does not meet the priority level you have selected.

Standard Request

All requests are set to standard by default.

Expedited Review Request

Disclaimer: Expedited Review Request Clarification

Please be advised that selecting the "Expedited" option for your request does not obligate the Registrar to provide an expedited response. The "Expedited" designation primarily signifies your view that the nature of your request warrants a faster processing time, but it does not guarantee an accelerated resolution.

Do not rely on this Expedited Review Request functionality in emergency situations such as but not limited to an imminent threat to life, serious bodily injury, critical infrastructure (online and offline), or child exploitation. In these circumstances you should contact the Registrar directly for immediate assistance. For the Registrar's contact information, please refer to this [page](#).

Please exercise caution and discretion when selecting the "Expedited" option, as it is not a substitute for direct communication in emergency situations, and it is not necessary for all requests. If you select "Expedited Review Request", provide an explanation in the box below.

Before you start

Create New Request

Before you get started, please check ICANN's [lookup tool](#) to see if the registration data you are seeking may be publicly available. In some cases, the domain name may have been registered through a privacy or proxy service, in which case, the RDRS may not be the right tool to request the nonpublic registration data.

If you are seeking underlying proxy customer registration data or privacy customer contact information, this may impact how or if a registrar will review your request via this service. You may wish to directly contact the privacy or proxy provider, whose contact information can be obtained via the ICANN's [lookup tool](#), to determine the circumstances under which it will reveal the customer's identity and/or contact information. For more information about the privacy and proxy service, please refer to the FAQ.

Please note, the registration data for domain names under country code top-level domain cannot be requested using the RDRS.

Do you want to proceed with your request?

Yes

No

The screenshot shows the ICANN registration data lookup tool interface. At the top, there is a navigation bar with language options: العربية, 简体中文, English, Français, Русский, and Español. Below this is the ICANN | LOOKUP header. The main section is titled "Registration data lookup tool" and contains a search input field with the placeholder text "Enter a value" and a blue "Lookup" button. Above the input field, there is a prompt: "Enter a domain name or an Internet number resource (IP Network or ASN)" and a link to "Frequently Asked Questions (FAQ)". Below the input field, there is a disclaimer: "By submitting any personal data, I acknowledge and agree that the personal data submitted by me will be processed in accordance with the ICANN Privacy Policy, and agree to abide by the website Terms of Service and the registration data lookup tool Terms of Use." The bottom section is titled "About ICANN's registration data lookup tool" and contains two paragraphs of text. The first paragraph explains that the tool uses the Registration Data Access Protocol (RDAP) as a replacement for WHOIS. The second paragraph lists advantages of RDAP over WHOIS. The final section is titled "Nonpublic registration data" and explains how to request access to nonpublic data through the Registration Data Request Service (RDRS).

About ICANN's registration data lookup tool

The ICANN registration data lookup tool gives you the ability to look up the current registration data for domain names and Internet number resources. The tool uses the Registration Data Access Protocol (RDAP) which was created as a replacement of the WHOIS (port 43) protocol. RDAP was developed by the technical community in the [Internet Engineering Task Force](#) (IETF).

RDAP has several advantages over the WHOIS protocol, including more secure access to data, a standardized and user-friendly format, support for internationalization, and the ability to provide differentiated access to registration data. More information can be found [here](#). For additional information on registration data, please visit the [Registration Data at ICANN page](#).

Nonpublic registration data

To request access to nonpublic registration data, use the [Registration Data Request Service](#) (RDRS). Please make sure you have first checked that the data is unavailable through the lookup tool. The RDRS is intended for use by those with a legitimate interest in nonpublic data like law enforcement, intellectual property professionals, consumer protection advocates, cybersecurity professionals, and government officials. For more information on the

Main Target

What is nonpublic gTLD registration data?

Nonpublic registration data can include information such as a contact name, home or email address, and phone number related to a domain under a gTLD. This type of data is not necessarily published publicly anymore due to personal data protection regulations.

Help!

The screenshot shows the ICANN website's navigation menu and a sidebar with various resource categories. The main content area features a heading for the Registration Data Request Service (RDRS) and a call-to-action button that says "Click here to access the RDRS". Registration Data Request Service

Simplifying Requests for Nonpublic gTLD Registration Data

[Click here to access the RDRS](#)

The Registration Data Request Service (RDRS) is a new and free service developed to provide a more consistent and standardized format for handling requests to access nonpublic registration data related to generic top-level domains (gTLDs). This two-year pilot program which launched in November 2023 is a proof-of-concept initiative for individuals and entities with a legitimate interest in nonpublic registration data. It was developed with community input and implemented at the direction of the ICANN Board to help inform policy decisions related to a System for Standardized Access/Disclosure (SSAD). RDRS usage metric reports are

Requests

The screenshot shows the ICANN RDRS (Registration Data Request Service) interface. At the top, the user is identified as CHENG-HSIEN. The main navigation includes 'RDRS Registration Data Request Service', 'Requests', 'Templates', and 'Help'. A 'Create a New Request' button is visible. Below the navigation, there are filters for request status: 'All Requests', 'Expedited', 'Pending', 'Approved', 'Denied', 'Canceled', and 'Publicly Available'. A search bar for 'Search Domain Subject' is also present. The main content area displays a table of requests with the following data:

Request Date	Status	Domain Subject	Priority
2024-03-29	Publicly Available		Standard Request
2024-02-22	Approved		Standard Request
2024-02-22	Approved		Standard Request

At the bottom of the table, there is a pagination control showing '1' of 13 results, and a footer indicating '11 - 13 of 13 results'.
